

Be sure to prepare each dose immediately before you administer medication

1. **Wash hands**
2. Prepare the medication:
3.
  - Inspect the **medication label** for correct name, medication and expiration date
  - Hold the bag firmly in one hand and the vial in the other
  - Bend the spike between the vial and the bag back and forth until it breaks inside the plastic sleeve (**Picture A**):

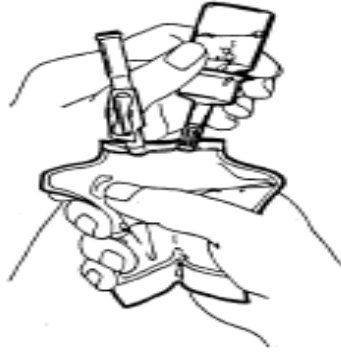

**A**

- Hold the bag so that the vial is at the bottom
- Gently squeeze fluid from the bag into the vial until it is about half full (**Picture B**):

**B**

- Gently rotate the vial until **all** of the medication has dissolved
- Turn the bag upside down so the vial is at the top
- Gently squeeze the bag again to draw **all** of the fluid from the vial down into the bag  
**(Picture C):**

**C**

Repeat steps **B** and **C** if necessary until **all of the medication** is dissolved and drawn into the bag

**Continue to prepare your infusion using the instructions for your pump  
or Flow Regulator Tubing**
